DATA ANALYST & AI ENGINEER – CAREER HIGHLIGHTS

Results-driven Data Analyst and AI Engineer with 2+ years of experience delivering data-driven solutions across property tech, construction, and AI sectors. Proven track record building production AI applications, automating data pipelines, and creating actionable dashboards that drive 25-30% efficiency gains.

- Built CV Agent AI application serving 500+ users with multi-LLM orchestration, real-time ATS optimization, and full-stack development (Flutter/Dart, Python), demonstrating end-to-end AI product development
- Optimized YOLOv8n deep learning model achieving 39.34% faster inference and 11.39% size reduction for edge deployment, showcasing advanced ML optimization and computer vision expertise
- Delivered 25% forecasting improvement through PostgreSQL database analysis and Power BI dashboards, reducing client reporting time by 30% and driving data-informed business decisions

Skills: Python | SQL (PostgreSQL, MySQL) | Machine Learning/AI | Tableau/Power BI | Cloud Computing (Snowflake, AWS) | Data Engineering | Deep Learning | Statistical Analysis

EXPERIENCE

The Bitrates	Hurstville, NSW, Australia
<i>Data Analyst & AI Engineer (Contract)</i>	<i>July 2024 – Present</i>
• Analyzed client website databases using PostgreSQL and Power BI, improving forecasting accuracy by 25% • Built CV Agent (Flutter/Dart frontend, Python backend) with multi-LLM orchestration serving 500+ users • Implemented real-time ATS optimization algorithms analyzing keywords, structure, and readability • Collaborated with cross-functional teams to identify business opportunities through statistical analysis	
Outlier.ai	Remote
<i>AI Data Trainer & Evaluator (Freelance)</i>	<i>July 2024 – Present</i>
• Evaluated and improved AI model responses for accuracy, quality, and alignment with expectations • Developed training prompts to identify AI performance gaps and enhance model capabilities • Provided detailed feedback on AI training projects, contributing to reliable AI systems	
iBuild Building Solutions	Victoria, Australia
<i>Data Analyst</i>	<i>Mar. 2024 – June 2024</i>
• Automated data extraction for population datasets using Python, improving accuracy by 20% • Built Power BI dashboards reducing client reporting time by 30% and improving decision-making • Optimized customer support response times through data analysis, achieving 15% efficiency gain • Enhanced team collaboration through automated workflows and standardized data processes	
Property Console	Sydney, Australia
<i>Software Engineer and Analyst</i>	<i>June 2023 – Nov. 2023</i>
• Built Python scripts to track key metrics, ensuring 99% data accuracy and improved data integrity • Collaborated with development teams to enhance analytics, improving processing speed by 25% • Preprocessed and analyzed large datasets, producing Tableau dashboards for stakeholder reporting • Supported customer-focused initiatives with Python-driven insights and data visualizations	

FEATURED PROJECTS

CV Agent – AI-Powered Resume Builder <i>Flutter, Python, Multi-LLM, APIs</i>	Live Production
- Developed full-stack AI application with 500+ active users; real-time ATS scoring and optimization - Implemented multi-model fallback system ensuring 99% uptime and reliable content generation - Created role-specific templates with quantified achievement suggestions and skills gap analysis - Built export functionality (PDF/Doc) with professional templating and formatting - Live: mahesh989.github.io/cv-new Code: github.com/mahesh989/cv-new	
YOLOv8n Corrosion Detection Optimization <i>PyTorch, Computer Vision, Edge AI</i>	Research
- Optimized YOLOv8n model for real-time corrosion detection on drones and edge devices - Achieved 11.39% model size reduction through L1-norm structured pruning - Improved inference speed by 39.34%, making model deployable on resource-constrained devices - Applied fine-tuning to mitigate 7.43% mAP@50-95 accuracy drop post-pruning - Code: github.com/mahesh989/corrosion-detection	
Heart Attack Risk Prediction System <i>Python, scikit-learn, Deep Learning</i>	ML Application
- Built ensemble ML system for cardiovascular risk prediction achieving 92% accuracy - Implemented logistic regression, random forests, and deep learning with class imbalance handling - Created clear visualizations for medical stakeholders and model interpretability - Code: github.com/mahesh989/heart-attack-prediction	
SQL Data Pipeline Automation <i>SQL, PostgreSQL, Python, ETL</i>	Data Engineering
- Automated ETL pipeline for property listing analysis with real-time processing capabilities - Reduced data processing time by 30% through optimized queries and validation frameworks - Enabled real-time business intelligence dashboards for strategic decision-making - Code: github.com/mahesh989/sql-pipeline	

TECHNICAL SKILLS

Programming: Python (Pandas, NumPy), SQL (PostgreSQL, MySQL), R
Machine Learning: scikit-learn, TensorFlow, PyTorch, Deep Learning, Computer Vision, NLP
Data Engineering: ETL Pipelines, Snowflake, AWS, Data Warehousing
Visualization: Tableau, Power BI, Matplotlib, Seaborn, Plotly
Development: Git/GitHub, Docker, VS Code, Jupyter, Flutter/Dart, REST APIs
Analytics: Statistical Analysis, A/B Testing, Predictive Modeling, Time Series, Optimization

EDUCATION

Charles Darwin University	Sydney, Australia
<i>Master of Data Science (GPA: 6.35/7)</i>	2023 – 2024
CY Cergy Paris University	Cergy-Pontoise, France
<i>PhD in Physics</i>	2018 – 2022
CY Cergy Paris University	Cergy-Pontoise, France
<i>Master in Theoretical Physics</i>	2016 – 2018
Tribhuvan University	Kathmandu, Nepal
<i>Bachelor of Science in Information Technology (GPA: 83%)</i>	July 2014 – Aug. 2018

PROFESSIONAL CERTIFICATIONS

Snowflake Data Engineering Professional – Snowflake	2024
Snowflake Data Warehousing Professional – Snowflake	2024
Google Analytics Certification – Google Skillshop	2024
SQL Essential Training – LinkedIn Learning	2024
